As part of their everyday work bricklayers must be able to interpret technical documents, understand the properties of various mortars/building materials, and understand the basics of health and safety on site. Brickwork Level 1 is in full colour,

Read Book Construction Diploma Unit Test Cc1001k

and has been tailored to match Level 1 of both the Construction Alliance Awards Diplomas in Bricklaying and the Trowel Occupations NVQs. Written by Malcolm Thorpe, who acted as a CITB adviser and was involved in the draughting of the Intermediate Construction Award syllabus (bricklaying route), Brickwork Level 1 matches the latest industry-based requirements and technical developments in the field, including recent changes to the Building Regulations. This text is an essential reference for qualified bricklayers and other professionals working in the construction industry, as well as NVQ students wishing to embark on a career in bricklaying.

Motivation for This Book The OPC Foundation provides

specifications for data exchange in industrial automation. There is a long history of COM/DCOM-based specifications, most prominent OPC Data Access (DA), OPC Alarms and Events (A&E), and OPC Historical Data Access (HDA), which are widely accepted in the industry and implemented by almost every system targeting industrial automation. Now the OPC Foundation has released a new generation of OPC specifications called OPC Unified Architecture (OPC UA). With OPC UA, the OPC Foundation fulfills a technology shift from the retiring COM/DCOM technology to a service-oriented architecture providing data in a platform-independent manner via Web Services or its own optimized TCP-based protocol. OPC UA unifies the previous specifications into one single address space capable of dealing with current data, alarms

Read Book Construction Diploma Unit Test Cc1001k

and events and the history of current data as well as the event history. A remarkable enhancement of OPC UA is the Address Space Model by which vendors can expose a rich and extensible information model using object-oriented techniques. OPC UA scales well from intelligent devices, controllers, DCS, and SCADA systems up to MES and ERP systems. It also scales well in its ability to provide information; on the lower end, a model similar to Classic OPC can be used, providing only base information, while at the upper end, highly sophisticated models can be described, providing a large amount of metadata including complex type hierarchies.
