Voluntary cross-border social dialogue initiatives and agreements such as International Framework Agreements (IFAs) have been one response. IFAs are the outcome of negotiations between individual MNEs and global union federations. IFAs aim to establish ongoing relationships between MNEs and such federations, for the benefit of both parties.

Cross border social dialogue and agreements (GOVERNANCE)

Border regions in Central Europe undergo tremendous changes due to the enlargement of the European Union and the related processes of Europeanization, bordering and re-bordering. The book explores the consequences of these processes for cross-border governance and spatial planning in Central Europe. It combines analyses of European and national framework conditions with case studies from border regions and cities in 8 countries. The focus is on generic questions of cross-border planning and cooperation as well as on selected sectors such as nature conservation, transport and economic development. The book is written for the international scientific community and for practitioners in the fields of spatial planning, cross-border cooperation, environmental protection and structural policy.

Border regions in Central Europe undergo tremendous changes due to the enlargement of the European Union and the related processes of Europeanization, bordering and re-bordering. The book explores the consequences of these processes for cross-border governance and spatial planning in Central Europe. It combines analyses of European and national framework conditions with case studies from border regions and cities in 8 countries. The focus is on generic questions of cross-border planning and cooperation as well as on selected sectors such as nature conservation, transport and economic development. The book is written for the international scientific community and for practitioners in the fields of spatial planning, cross-border cooperation, environmental protection and structural policy.

What current discourses are relevant for border areas? What opportunities for and obstacles to integrated territorial development arise from the specific situation of border regions? How can these be utilised or overcome in a goal-oriented way? These questions were central to the discussions of the Border Futures working group. Border regions like the Greater Region or the Trinational Metropolitan Region of the Upper Rhine extend far beyond the immediate border area. While institutional structures of cooperation can be perpetuated through agreements and organisations, there is a lack of instruments which cross-border cooperation structures can deploy in response to changing situations. Cross-border cooperation faces new challenges from increasing cross-border interactions, processes of economic structural transformation, new energy policies in the national sub-spaces, and demographic change. Another factor is increasing spatial polarisation, which influences the further development and future viability of the affected border areas, and involves metropolitan issues in urban centres and the provision of public services in rural districts. Building on discussions of the Border Futures working group, this volume sheds light on cross-border cooperation in practice with recent research relevant to planning in border regions in the European context. The insights collected here are intended to be usable in the border areas within the territory of the Regional Working Group and should also contribute towards the broader specialist discourse on the further development of cross-border cooperation. Issues of sustainable cross-border governance, new spatial functions and new planning instruments play a role here, as do the possibilities provided by the current EU structural policy programming period for border areas

Innovations are considered to discover new solutions to exploit novelty in the technological, but in social and economic fields as well. It means, the concept of innovations is true also for a sustainable development. The sustainability of the regional strategies is studied at the background of the regionalisation of the governance system. Particularly, the regions of Eastern Slovakia and Northern Hungary, both having a tradition of heavy industry, are studied in their cross-border innovation and sustainability context. The realization of the joined regional innovation strategy represents a unique opportunity to test and implement the RIS process in a cross-border environment. The main priority, renewable energy sources, results from the historical heavy industry path, the cross-border clusters and especially in. The path dependence concept is applied to two border regions is studied on the background of historical and economic transformation along the axes: - from centrally planned economy to market economy - from sectoral orientation of economy to regionalized economy - from industrial economy to knowledge-based economy and services - from environmentally harmful production to renewable energy sources sector - from vertical organization and administration to horizontal partnerships and clustering - from regional production to regional innovations - from national governance to multi-level and cross-border regional governance

This edited volume explains the importance of regional public goods (RPGs) for sustainable development and shows why they are particularly important in the context of 21st-century international relations. By presenting a new and original data set and by presenting original essays by renowned scholars, this book lays the foundation for what will become an increasingly important focus for both economic development and international relations as well as for their intersection. The volume contains four parts. The first introduces the core issues and concepts that are explored throughout the book as well as a new and original data set on RPGs. The second part further develops specific concepts important for understanding 21st-century RPGs: regional leadership, alliances, networks, and outcomes. The third examines how cooperation takes place worldwide for a range of important RPGs. Finally, the fourth part discusses how public goods are produced in specific regions, stressing that each region has a distinct context and that these contexts overlap in a decentralized "multiplex" manner. Global economic cooperation will be different in the 21st century, and this volume will be of interest to students and scholars of global governance, economic development, international political economy, sustainable development, and comparative regionalism.

This book explores the intrinsically multiscale issue of renewable energy transition from a local, national and transnational perspective, and provides insights into current developments in the Upper Rhine Region that can serve as an international model. Organised around the exploration of stakeholder issues, the volume first describes a framework for public action and modelling and then articulates a triple complementary focus from the viewpoint of law, economics and sociology. This multidisciplinary approach is anchored in the social sciences, but also explores the ways in which technological issues are increasingly debated in the implementation of the ecological transition. With a focus on the Upper Rhine Region of France, Germany and Switzerland, the contributions throughout analyse how concrete regional projects emerge, and whether they are carried out by local authorities, private energy groups, network associations or committed citizens. From this, it appears that real-world energy transition modes can be best understood as permanent transactional processes involving institutional regulators, economic levers and barriers and social interactions. This book will be of interest to advanced students and scholars focusing on renewable energy transition, stakeholder issues, environment and sustainability studies, as well as those who are interested in the methodological aspects of the social sciences, especially within the fields of sociology, law, economy, geography, political science, urbanism and planning.

Based on migration dynamics in the Southern African Development Community (SADC) region, this edited volume focuses on the activities of grassroots and informal non-state actors. The authors explore cross-border economic activities, migration governance issues, the regional integration project of the SADC, and implications for sustainable development in Africa. Examining the apparent success of immigrant entrepreneurs operating in cities of economically depressed countries such as Zimbabwe, it also discusses the role of local authorities in managing migration to achieve development. Thus, the book is centred on human mobility, the building of cohesive communities between immigrants and indigenous people, the informal economic activities of cross-border traders and undocumented migrants, and regional integration, providing a multidisciplinary and rich source of knowledge for scholars interested in African politics, labour, migration and economy.

Studying institutional development is not only about empowering communities to withstand political buccaneering; it is also about generating effective and democratic governance so that all members of a community can enjoy the benefits of social life. In the U.S.-Mexico borderlands, cross-border governance draws only sporadic—and even erratic—attention, primarily in times of crises, when governance mechanisms can no longer provide even moderately adequate solutions. This volume addresses the most pertinent binational issues and how they are dealt with by both countries. In this important and timely volume, experts tackle the important problem of cross-border governance by an examination of formal and informal institutions, networks, processes, and mechanisms. Contributors also discuss various social, political, and economic actors and agencies that make up the increasingly complex governance space that is the U.S.-Mexico border. Binational Commons focuses on whether the institutions that presently govern the U.S.-Mexico transborder space are effective in providing solutions to difficult binational problems as they manifest themselves in the borderlands. Critical for policy-making now and into the future, this volume addresses key binational issues. It explores where there are strong levels of institutional governance development, where it is falling, how governance mechanisms have evolved over time, and what can be done to improve it to meet the needs of the U.S.-Mexico borderlands in the next decades. Contributors Silvia M. Chavez-Baray Kimberly Collins Irasema Coronado Guadalupe Correa-Cabrera Pamela L. Cruz Adrián Duhaít James Gerber Manuel A. Gutiérrez Víctor Daniel Jurado Flores Evan D. McCormick Jorge Eduardo Mendoza Cota Miriam S. Morroy Eva M. Moya Stephen Mumme Tony Payan Carla Pederzini Villarreal Sergio Peña Octavio Rodríguez Ferreira Cecilia Sarabia Ríos Kathleen Staudt

The implementation of the Association Agreement (AA), including the Deep and Comprehensive Free Trade Area (DCFTA), between the EU and Ukraine has brought about a qualitatively new situation in the development of border regions and regional societies on both sides of the Schengen border. This volume's comparative study of the impacts of the AA and the DCFTA on borderlands in Ukraine, Poland, Slovakia, Hungary and Romania will contribute to the identification of new opportunities for cross-border cooperation and policy considerations for its further development.
