A more specific definition has been adopted by the Functional Foods Center (Dallas, TX) that states that a functional food is a “ natural or processed food that contains known biologically-active compounds which when in defined quantitative and qualitative amounts provides a clinically proven and documented health benefit, and thus, an important source in the prevention, management and treatment of chronic diseases of the modern age. ”

Functional Food Biotechnology: The Use of Native and ...

A functional food can be a natural whole food, a food to which a component has been added, or a food from which a component has been removed by technological or biotechnological means. It can also be a food in which the nature of one or more components has been modified, or a food in which the bioavailability of one or more components has been modified, or any combination of these possibilities.

What are Functional Foods and How Can They Help Us? : (EUFIC)

Functional foods are generally separated into two categories: conventional and modified (). Conventional foods are natural, whole-food ingredients that are rich in important nutrients like vitamins ...

Functional Foods: Definition, Benefits, and Uses

Functional foods deliver additional or enhanced benefits over and above their basic nutritional value. The term ‘ functional foods ’ can be viewed as encompassing a very broad range of products. Some functional foods are generated around a particular functional ingredient, for example foods containing probiotics, prebiotics, or plant stanols and sterols.
