Gender Equality and Responsible Business places gender equality at the heart of the responsible business agenda with the aim of contributing to CSR practice as well as research. Discussion about gender issues in the field of corporate responsibility has focused on workplace issues and corporate boards, which are important areas of work. However, the great benefit of exploring gender issues through a responsible business lens is that this requires us to also examine the wider gender impacts of business in the marketplace - for example, with regard to suppliers, supply chains, and consumers, and with respect to the communities where business operates, and the wider ecological environment - indeed throughout corporate value chains. Through contributions from practitioners in business and civil society, as well as academia, this book broadens the agenda, opening the field to new voices, and facilitates dialogue among and between practitioners and researchers. Contributions within the edited collection elucidate current practice, bring new perspectives, and help us to expand the field of responsible business with regard to gender equality, and beyond.

This book examines key issues in gender equality and corporate social responsibility in Japan. Legal compliance, the business case and social regulation are examined as driving factors for enhancing gender equality in corporations. In turn, case studies from various contexts, such as the hotel industry, retail and financial services companies add practical insights to the theoretical debate. The role of governments, NGOs and supranational organizations is examined as well. Given its scope, the book will appeal to undergraduate and graduate students, scholars, policymakers and practitioners interested in advancing the gender, CSR and sustainability debates.

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the "2030 Agenda for Sustainable Development". On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. It encompasses 17 volumes, each devoted to one of the 17 SDGs. This volume addresses SDG 5, namely "Achieve gender equality and

empower all women and girls" and contains the description of a range of terms, which allows a better understanding and fosters knowledge. This SDG is considered by many as a pivotal goal since the significant role of women in achieving sustainable development has always been acknowledged in several official UN declarations. Yet gender disparity is still rampant under various guises in various countries. Women's rights need to be strongly safeguarded through legislation to ensure equal opportunities. Concretely, the defined targets are: End all forms of discrimination against all women and girls everywhere Eliminate all forms of violence against all women and girls in the public and private spheres, including trafficking and sexual and other types of exploitation Eliminate all harmful practices, such as child, early and forced marriage and female genital mutilation Recognize and value unpaid care and domestic work through the provision of public services, infrastructure and social protection policies and the promotion of shared responsibility within the household and the family as nationally appropriate Ensure women's full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic and public life Ensure universal access to sexual and reproductive health and reproductive rights as agreed in accordance with the Programme of Action of the International Conference on Population and Development and the Beijing Platform for Action and the outcome documents of their review conferences Undertake reforms to give women equal rights to economic resources, as well as access to ownership and control over land and other forms of property, financial services, inheritance and natural resources, in accordance with national laws Enhance the use of enabling technology, in particular information and communications technology, to promote the empowerment of women Adopt and strengthen sound policies and enforceable legislation for the promotion of gender equality and the empowerment of all women and girls at all levels Editorial Board Katarzyna Cichos, Vijaya Deshmukh, Melissa Haeffner, Sandra Hopkins, Tamara Hunt, Nerise Johnson, Chhabi Kumar, Julia Mambo, Anagha Paul, Andréia Faraoni Freitas Setti, Tony Wall

Gender equality is a moral and a business imperative. But unconscious bias holds us back and de-biasing minds has proven to be difficult and expensive. Behavioral design offers a new solution. Iris Bohnet shows that by de-biasing organizations instead of individuals, we can make smart changes that have big impacts—often at low cost and high speed.

Women and Sustainability in Business: A Global Perspective, brings together original research from a dozen countries, concerning the issues and challenges facing women in sustainable business. This is a recurrent topic among researchers, regulators, companies and rating agencies. Governments pay special attention to how women impact the economy when shaping their strategies on economic sustainability. Women's contribution to business is fundamental to creating a sustainable economy, such that businesses try to strengthen 'women's presence' within their organisations, especially on their boards. Today, sustainable companies cannot survive without strategies involving women. Stakeholders, regulators, NGOs and rating agencies track both women-focused strategies and the corporate sustainability reports of companies. Well-designed strategies for women workers help companies to develop their financial and social sustainability initiatives progressively. This book analyses the practice of women in sustainable business, in terms of company performance, social responsibility, board management, entrepreneurship, employment, education, management, social sustainability, environmental politics and technology, from a wide range of diverse, regional perspectives and highlights the differences between the underdeveloped, developing and developed world.

This volume addresses the need to integrate gender equality into business and management education and provides examples of leading initiatives illustrating how this can occur from various disciplinary and global perspectives. Gender inequality has a long history in business schools and the workplace, and traditions are hard to change. Some disciplines remain resolutely gendered, affecting both women and men; and case materials on women leaders and managers are still rare. The chapters provide conceptual and research rationales as to why responsible management education must address the issue of gender equality. They also identify materials and resources to assist faculty in integrating gender issues and awareness into various disciplines and fields. These include specific case studies and innovations that assess or address the role of gender in various educational environments. The book is designed to help faculty integrate the topic of gender equality into their own teaching and research and gain support for the legitimacy of gender equality as an essential management education topic. This is the first book in a series on gender equality as a challenge for business and management education, published with the Principles of Responsible Management Education (PRME) Working Group on Gender Equality.

For pathways to be truly sustainable and advance gender equality and the rights and capabilities of women and girls, those whose lives and well-being are at stake must be involved in leading the way. Gender Equality and Sustainable Development calls for policies, investments and initiatives in sustainable development that recognize women's knowledge, agency and decision-making as fundamental. Four key sets of issues - work and industrial production; population and reproduction; food and agriculture, and water, sanitation and energy provide focal lenses through which these challenges are considered. Perspectives from new feminist political ecology and economy are integrated, alongside issues of rights, relations and power. The book untangles the complex interactions between different dimensions of gender relations and of sustainability, and explores how policy and activism can build synergies between them. Finally, this book demonstrates how plural pathways are possible; underpinned by different narratives about gender and sustainability, and how the choices between these are ultimately political. This timely book will be of great interest to students, scholars, practitioners and policy makers working on gender, sustainable development, development studies and ecological economics.

Many businesses and organizations are increasingly aware of the case for promoting gender equality, both within and outside their organizational boundaries. Evidence suggests that gender equality in the workplace boosts performance, and legal frameworks in many countries mandate specific action on gender inequality in the workplace. However, despite organizational policies on promoting equality and equal opportunities, there remain challenges to be overcome in many businesses, including throughout their supply chains. The book provides research rationales as to why responsible organizations must address the issue of gender equality in the workplace. It also presents case studies, action research and examples of good practices, describing how businesses and organizations are working to promote gender equality in various contexts. The book is designed to support the rationale for gender equality in business and organizations, providing evidence of implementation of gender equality in the workplace and advice on how to deal with and overcome challenges. It will be of interest to academics, employees, practitioners, policy-makers, businesses, institutions and organizations.

The Indian Constitution is the largest written constitution that guarantees equality to women and empowers the State to take affirmative actions in favour of women. India has adopted International conventions for protection of rights of women and granting them equality and ratified the Convention on Elimination of All Forms of Discrimination Against Women (CEDAW) in the year 1993. The National Policy for Women Empowerment was presented in 2001, the goal of that policy to bring about the advancement, development and empowerment of women and enable women to become financially independent. Currently, India is the only country where the economic gender gap is larger than the political gender gap. Women are required to understand their own potential and overcome social barriers. With constant support of the government, change in stereotype mindset and skill development in women, India will continue witnessing gradual increase in women entrepreneurship in future. The aim of this book is to show the latest state of knowledge on the topic of women entrepreneurship, the role of women in business and women empowerment in India. Many aspects relating to role of women in business, sustainable business development and aspects going beyond economic empowerment of women are discussed in addition to presenting legal and regulatory frameworks. This book will be of interest to researchers, academics, policymakers, and students in the fields of entrepreneurship, empowerment, gender studies, and law.
