From the Master and Servant legislation to the Factories Acts of the 19th century, the criminal law has always had a vital yet normatively complex role in the regulation of work relations. Even in its earliest forms, it operated both as a tool to repress collective organizations and enforce labour discipline, while policing the worst excesses of industrial capitalism. Recently, governments have begun to rediscover criminal law as a regulatory tool in a diverse set of areas related to labour law: 'modern slavery', penalizing irregular migrants, licensing regimes for labour market intermediaries, wage theft, supporting the enforcement of general labour standards, new forms of hybrid preventive orders, harassment at work, and industrial protest. This volume explores the political and regulatory dimensions of the new 'criminality at work' from a wide range of disciplinary perspectives, including labour law, immigration law, and health and safety regulations. The volume provides an overview of the regulatory terrain of 'criminality at work', exploring whether these different regulatory interventions represent politically legitimate uses of the criminal law. The book also examines whether these recent interventions constitute a new pattern of criminalization that operates in preventive mode and is based upon character and risk-based forms of culpability. The volume concludes by reflecting upon the general themes of 'criminality at work' comparatively, from Australian, Canadian, and US perspectives. Criminality at Work is a timely, rich and ambitious piece of scholarship that examines the many intersections between criminal law and work relations from a historical and contemporary vantage-point.

This book explores various explanatory frameworks for paranormal encounters. It opens with the story of an inexplicable human figure seen crossing a secluded hotel corridor, interpreted as a ghost by the sole witness. The subsequent chapters explore the three most important historical perspectives accounting for this and other types of paranormal experience. Each perspective is examined from first principles, with specific reference to what happened in the corridor, how it happened, why it happened, and who might be responsible. The first perspective considers the experience to be legitimate - to be something real - and various possibilities are presented that are grounded in the paranormal and parapsychological literature, among which a "ghost" is one putative explanation. In turn, the second perspective treats the experience as being wholly illegitimate. With reference to psychological theory, the ghost sighting is a product of erroneous consciousness. The third perspective is different yet again, and considers the sighting to be authentic, but argues that explaining the ghost requires a radical departure from conventional models of reality and consciousness. By contrasting these three paths, the book provides a valuable resource for readers interested in the philosophical and psychological origins of explanations for paranormal experiences, from the 19th century to the present. It will appeal to general readers in addition to students and scholars of parapsychology, anomalistic psychology, and consciousness studies.
