From flying squirrels to grizzly bears, and from torpid turtles to insects with antifreeze, the animal kingdom relies on some staggering evolutionary innovations to survive winter. Unlike their human counterparts, who must alter the environment to accommodate physical limitations, animals are adaptable to an amazing range of conditions. Examining everything from food sources in the extremely barren winter landscape to the chemical composition that allows certain creatures to survive, Heinrich's *Winter World* awakens the largely undiscovered mysteries by which nature sustains herself through winter's harsh, cruel exigencies.

“Bernd Heinrich is one of our greatest living naturalists in the tradition of Gerald Durrell....A national treasure.” —Los Angeles Times Summer World is an intimate, accessible, and eloquent illumination of animal survival in the Summer months from Bernd Heinrich, bestselling author of Winter World and “our latter-day Thoreau” (Publishers Weekly). Pulitzer Prize-winner Edmond O. Wilson (On Human Nature) calls Heinrich’s fascinating exploration and appreciation of the natural order a, “lovely book, meticulously etched and based on impassioned but exacting scientific research,” while the New York Times Book Review raves, “Animals come to life in gripping detail...and so does Heinrich.... The man is irrepressible.”

Presents a detailed investigation into the feeding behavior of ravens during four winters in Maine and comes up with several unexpected conclusions.

Describes the animal world's treatment of death, from animal burial and prey disposal behaviors to the important role of humans as scavengers.

A third edition of a classic work on cold climate ecosystems, updated with a new chapter on mammals and birds.

Heinrich involves us in his quest to get inside the mind of the raven. But as animals can only be spied on by getting quite close, Heinrich adopts ravens, thereby becoming a "raven father," as well as observing them in their natural habitat. He studies their daily routines, and in the process, paints a vivid picture of the ravens' world. At the heart of this book are Heinrich's love and respect for these complex and

engaging creatures, and through his keen observation and analysis, we become their intimates too. Heinrich's passion for ravens has led him around the world in his research. *Mind of the Raven* follows an exotic journey—from New England to Germany, and from Montana to Baffin Island in the high Arctic—offering dazzling accounts of how science works in the field, filtered through the eyes of a passionate observer of nature. Each new discovery and insight into raven behavior is thrilling to read, at once lyrical and scientific.

“Each new page [is] more spellbinding than the one before—this is surely one of the most interesting books I’ve ever read.”—Elizabeth Marshall Thomas, author of *The Hidden Life of Dogs* When Bernd Heinrich decided to write a memoir of his ultramarathon running experience he realized that the preparation for the race was as important, if not more so, than the race itself. Considering the physiology and motivation of running from a scientific point of view, he wondered what he could learn from other animals. In *Why We Run*, Heinrich considers the flight endurance of birds, the antelope’s running prowess and limitations, and the ultra-endurance of camels to understand how human physiology can or cannot replicate these adaptations. With his characteristic blend of scientific inquiry and philosophical musings, Heinrich offers an original and provocative work combining the rigors of science with the passion of running.

2021 winner of the Philip K. Dick Award for A 2020 The Rumpus Book Club Selection “Blends a rural thriller and speculative realism into what could be called dystopian noir.... Profoundly moving.”—Library Journal, starred review In an endless winter, she carries seeds of hope Wylodine comes from a world of paranoia and poverty—her family grows marijuana illegally, and life has always been a battle. Now she’s

been left behind to tend the crop alone. Then spring doesn't return for the second year in a row, bringing unprecedented, extreme winter. With grow lights stashed in her truck and a pouch of precious seeds, she begins a journey, determined to start over away from Appalachian Ohio. But the icy roads and strangers hidden in the hills are treacherous. After a harrowing encounter with a violent cult, Wil and her small group of exiles become a target for the cult's volatile leader. Because she has the most valuable skill in the climate chaos: she can make things grow. Urgent and poignant, *Road Out of Winter* is a glimpse of an all-too-possible near future, with a chosen family forged in the face of dystopian collapse. Both gripping and lyrical, Stine's vision is of a changing world where an unexpected hero searches for where hope might take root. "Richly imagined, deeply moving and unthinkably offers hope in a world that uncannily resembles ours.... Gloriously well-written." —Ms. Magazine

Explores the methods by which animals navigate throughout the world, examining such examples as the monarch butterfly's use of an internal clock and the honey bee's reliance on the sun and mental maps.

Although Gerd Heinrich, a devoted naturalist, specialized in wasps, Bernd Heinrich tried to distance himself from his "old-fashioned" father, becoming a hybrid: a modern, experimental biologist with a naturalist's sensibilities. In this extraordinary memoir, the award-winning author shares the ways in which his relationship with his father, combined with his unique childhood, molded him into the scientist, and man, he is today. From Gerd's days as a soldier in Europe and the family's daring escape from the Red Army in 1945 to the rustic Maine farm they came to call home, Heinrich relates it all in his trademark style, making science accessible and awe-inspiring.
